2007

State Route 11 Marshall County

Tennessee's State Route 11 is a two-lane road connecting Pulaski in the south with Cornersville in the north. The winning five-mile section was opened to traffic in 1956.

The original pavement structure included a thick crushed limestone base, varying in thickness from 8 to 12 inches, topped by 2 inches of asphalt binder and 1.25 inches of HMA surface. The road has been in service for over 50 years with only two resurfacings. Part of the road was resurfaced in 1989 and the rest in 1991. The state performed another resurfacing in 2005.

Over its life, this road has carried approximately 3.3 million equivalent single axle loads but has required no other significant maintenance.
